

Back To Chiropractic ~ MRI 6 Hours Outline

Presented by: James Carter, DC, DACBR

Objectives: Provide a practical review of the basics of how to look at MRI and of common MRI findings that are often seen in a chiropractic practice. Emphasis will be placed on interpretation of signs, differential diagnosis, and case management implications.

Hours 1-3.5 : Review of how to look at MRI and common MRI findings that are often seen in the chiropractic practice, primarily in the spine. Discussion will include MRI signs with a review of pathologic-MRI correlation, associated conditions, clinical impact, need for additional studies if applicable, and impact on prognosis both short term and long term.

Hour 3.5-6 : Review of how to look at MRI and common MRI findings that are often seen in the chiropractic practice, primarily in the shoulder and knee. Discussion will include MRI signs with a review of pathologic-MRI correlation, associated conditions, clinical impact, need for additional studies if applicable, and impact on prognosis both short term and long term.

This course takes you back to the basics with MRI. We'll re-establish a sound search pattern while reviewing the common things we see in a chiropractic practice mainly in the spine, shoulder, and knee. In addition to emphasizing how to approach the MRI, we'll review basic MRI anatomy. ***If you want a nice introduction to MRI, then you've found what you've been looking for!***
